DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. No. 6,067,875 to Ritchey et al.

Ritchey et al disclose a bicycle shift control device comprising an outer casing 30 having a cable bore and an access opening, visible in figure 7C, from which a cable attachment point is accessible. A cable operated winding mechanism is disposed in said outer casing, including the pawl 76 and valleys 80. A maintenance cover 86 is slideably coupled to the outer casing as disclosed in column 7, lines 57-60. The casing includes a channel 90, and complementary retaining elements 88, 92, and 56 to maintain the cover in the closed position. The outer casing includes a first, stationary

half 30 and a second half 78 that rotates with the cable that are fixedly axially coupled together and the access opening is partially formed in each casing half, most clearly seen in Figure 7C. The maintenance cover includes a handle element, the sides of the cover, and is curved.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art shows shifter mechanisms including those with cable access covers and sliding window types of access panels.
